CONCEPT

```sql
INSERT INTO Y
SELECT *
FROM U1 u1
  JOIN U2 u2 ON u1.id = u2.id
  JOIN U3 u3 ON u1.id = u3.id
  ...
  JOIN UN un ON u1.id = un.id

SET 'table.optimizer.multi-join.enabled' = 'true';
```

IN ACTION

⚠️ *For the most part, use AI!* 😎

WHEN TO APPLY?

*If your job has **multiple joins** sharing **a common key**, and the **intermediate state is (significanty) larger than that of the input sources**.*

That is, follow the same advice as for SQL (FLIP-516). See more here.
